

Database Migration to AWS

AWS Database Migration Service (DMS)

More uptime, safer data and more time for growth. When you move databases from aging on-premises systems to managed AWS databases, the business keeps running while data is copied and kept in sync in the background. Every record is checked, so you move ahead with confidence — without a large IT team. Tyflex guides each step, from planning through go-live and beyond.

WHAT TYFLEX DELIVERS

- Priority databases moved while the business keeps running, data synced in the background
- Validated migration — records checked so nothing is lost
- Built-in backup, security and monitoring on the managed AWS database
- A clear rollback safety net if you need it
